Abstract

Purpose – Managerial finance (MF) started publication in 1975 and celebrated its 45th anniversary in 2019. The purpose of this study is to provide a bibliometric analysis of MF between 1996 and 2019.

Design/methodology/approach – This study uses the Scopus database to analyze the most frequent authors in MF along with their affiliated institutions and countries. It also identifies the most often cited MF articles. This study uses bibliometric indicators to analyze productivity and stature of MF. It also uses such tools as bibliographic coupling, keyword analysis and coauthorship analysis to analyze MF. Further, the study provides a temporal analysis of MF publishing across different ownership periods.

Findings – MF publishes between 60 and 70 articles each year and its number of citations steadily grows. Although contributors to the journal come from around the globe, they most often are affiliated with the United States, the United Kingdom and Greece. Temporal analysis of journal's themes reveals that it has expanded its scope from accounting research to a much wider array of finance topics. Bibliographic coupling network analysis shows that major themes published in MF involve stock markets, corporate governance, banking, financial decision-making and initial public offerings.

Research limitations/implications – Due to the unavailability of bibliometric data, the analysis excludes an analysis of MF between 1975 and 1995.

Originality/value – This study provides the first overview of the MF's publication and citation trends as well as its thematic structure. It also suggests future directions that the journal might take.

Keywords Managerial finance, Scopus, Bibliometrics, H-index, VOSviewer, Citation analysis, Keyword analysis

Paper type Research paper

1. Introduction

Managerial finance (MF) is a long-standing refereed finance journal that started publication in 1975. In 2005, Emerald Publishing acquired *MF* from Bamarick Publication. According to SCImago, *MF* has an *h*-index of 31, meaning that 31 articles published in *MF* have received at least 31 citations. The SCImago journal rank (SJR) indicates *MF*'s weighted average citations as 0.398 between 2016 and 2018. According to Scopus, the journal's source normalized impact per paper (SNIP) is 0.210. SNIP is calculated as the number of citations given in the present year to publications in the past three years divided by the total number of publications in the past three years. A journal with a *SNIP* of 1.0 has the median number of citations for journals in that field. Additionally, Scopus ranks *MF* 55th in the business, management and accounting (miscellaneous) category. *MF* celebrated its 45th anniversary in 2019. Currently, Don Johnson is the journal's editor.

This study examines the following research questions related to *MF* articles published between 1996 and 2019.

RQ1. What is *MF*'s pattern of annual publication and citation?

RQ2. Who are the most prolific *MF* authors and their affiliated institutions and countries?

Managerial Finance
Vol. 46 No. 11, 2020
pp. 1495-1517

DOI 10.1108/MF-06-2019-0277

RQ3. Which *MF* articles are most frequently cited in other journals?

RQ4. What changes has *MF*'s content undergone during different ownership periods?

RQ5. What is the status of coauthorship of *MF* articles?

A common practice among journals is to publish a special issue, editorial or a review study upon reaching some milestone (Schwert, 2002). Some examples are *The Accounting Review* (Heck and Bremser, 1986), *Journal of Corporate Finance* (Andrikopoulos and Trichas, 2018; Baker et al., 2020a), *Global Finance Journal* (Baker et al., 2019) and *Review of Financial Economics* (Baker et al., 2020b)

The remainder of the study has the following organization. Section 2 discusses the methodology used while Section 3 presents the findings of the descriptive analysis. Sections 4, 5 and 6 present the results of the keyword analysis, bibliographic coupling and coauthorship analysis, respectively. Section 7 concludes by summarizing the findings and offering future directions for *MF*.

2. Methodology

Pritchard (1969) first introduced bibliometrics, which is concerned with statistical analysis of bibliographic data (Broadus, 1987) for determining the intellectual structure of any scientific field (Hota et al., 2019). The current study uses bibliometric methodology for three reasons. First, bibliometrics is an widely recognized field of study with applications in many disciplines (Ellegaard and Wallin, 2015) including management (Zupic and Čater, 2015). Second, it can process large quantities of data. Third, the method uses quantitative rather than qualitative techniques, which helps to provide an objective interpretation of the research findings.

This study uses such tools as bibliographic coupling (Kessler, 1963), cword analysis (Callon et al., 1983) and coauthorship analysis (Crane, 1969) to examine *MF* articles. It also uses bibliometric indicators to measure productivity (number of articles published each year) and influence (number of citations per year) (Svensson, 2010). Other measures include citations per article (total citations divided by total articles) and the *h*-index (number of articles cited at least *n* times a year) (Alonso et al., 2009).

A search of the Scopus database during October 2019 yielded 1583 *MF* articles available between 1996 and 2019. Data were unavailable between 1975 and 1995 of *MF*'s history. For the purpose of content analysis, the study divides the available data into two ownership periods: the Bamarick era (1996–June 2009) and the Emerald era (July 2009–2019). It also separates the data for the Emerald era into regular and special issues. Although Emerald acquired *MF* from Bamarick in 2005, it continued to publish articles already accepted by Bamarick until mid-2009. As a result, the period between 2005 and June 2009 contains content representative of the Bamarick era while the later period represents the Emerald era. VOSviewer was the major tool for conducting the bibliometric analysis (Van Eck and Waltman, 2010) along with Gephi, which the study used for visualizing networks.

3. Descriptive analysis

3.1 Publication and citation trends

What is *MF*'s pattern of annual publication and citation? According to Don Johnson, *MF*'s scheduled publishing rate was five articles per issue or 60 articles per year through 2013. Between 2014 and 2018, the scheduled rate increased to 72 articles per year. Starting in 2019, the rate was 90 articles per year (115 including articles in press). The exact number, however, varies due to special issues differing in size, but the publisher's strategy has been to increase

the size of the journal. As Table 1 shows, *MF*'s output or productivity as measured by the number of articles published each year has remained fairly consistent between 1996 and 2019 averaging nearly 66 articles annually. The number of *MF* articles increased from 72 to 115 between 2015 and 2019.

Also, *MF*'s annual number of journal citations increased from two in 1996 to 992 in 2018. As Table 1 shows, *MF*'s influence, as measured by the number of citations, increased considerably since 1996. In 2005, *MF* had 119 citations, which grew almost ninefold by 2019. For the first time in 2018, an *MF* article received more than 25 citations within a two-year period.

Who are the most prolific *MF* authors and their affiliated institutions and countries? Table 2 shows the 25 most prolific *MF* authors between 1996 and 2019. The top-ranking authors are Ahmed Riahi-Belkaoui with 13 articles followed by H. Kent Baker with nine articles and Ahmed El-Masry, Krishnan Dandapani and Everton Dockery with seven articles each. Ahmed El-Masry is the most cited *MF* author with 169 citations followed by Nikolaos Eriotis and Dimitrios Vasiliou with 77 and 75 citations, respectively. Two of these authors are not among the top five contributors, suggesting that the number of *MF* articles may not necessarily reflect the number of citations.

Table 3 separates the most prolific *MF* authors into several periods. Ahmed Riahi-Belkaoui has the most *MF* articles with 13 between 1996 and 2005; Ahmed El-Masry has seven articles between 2006 and 2010; and H. Kent Baker has nine between 2011 and 2019. As previously noted, an author's total citations (TC) may be unrelated to that author's number of

Year	TP	CTP	TCP	TC	TC/TCP	≥25	≥10	≥5	≥1

Table 2.
The 25 most prolific MF authors between 1996 and 2019

Note(s): The table shows the most prolific MF authors between 1996 and 2019 where TP = total publications, TCP = total cited publications, TC = total citations, TC/TP = cites per publication, TC/TCP = cites per cited publication, *h* = h-index, C/A = citations per article and ≥50, ≥25, ≥10, ≥5 and ≥1 refer to articles with at least 50, 25, 10, 5 and 1 citation(s), respectively

MF articles. For example, Ahmed El-Masry's seven articles garnered 169 citations while Ahmed Riahi-Belkaoui's earlier 13 articles received only 66.

Table 4 ranks the institutions affiliated with MF authors with the most articles. Athens University of Economics and Business tops the list with 30 publications followed by the University of Illinois at Chicago and Concordia University with 17 each. Table 5 further breaks down contribution by institutions over several periods, but no single institution dominates the rankings over the periods studied.

According to Table 6, the top countries affiliated with MF authors are the United States with 874 articles followed by the United Kingdom with 138 and Greece with 90. The relative influence of these articles seems consistent with the number of publications. For example, US authors have both the most MF articles (874) and citations (3764).

Table 7 identifies the countries affiliated with MF authors over different periods. US authors dominate in all three periods. However, several Asian nations such as India, Taiwan, Malaysia and China have increased the frequency of their contributors suggesting the journal's growing global appeal.

Which MF articles are most frequently cited in other journals? Table 8 lists the 25 most often cited MF articles. Abbott *et al.* (2000) have the most citations with 194 followed by Kosmidou (2008) with 139, Abdullah *et al.* (2007) with 118 and Beneish (2001) with 107.

4. Keyword analysis

What changes has MF's content undergone during different ownership periods? The study used VOSviewer to conduct a keyword analysis. It divided the data set into the Bamarick era

Author	1996–2000			2001–2005			2006–2010			2011–2015			2016–2019

Table 6.

The 25 countries most affiliated with *MF* authors between 1996 and 2019

Note(s): This table shows the 25 countries most affiliated with *MF* authors between 1996 and 2019 where TP = total publications, TCP = total cited publications, TC = total citations, TC/TP = cites per publication, TC/TCP = cites per cited publication, h = h-index, C/A = citations per article and ≥ 100 , ≥ 50 , ≥ 25 , ≥ 10 , ≥ 5 and ≥ 1 refer to articles with at least 100, 50, 25, 10, 5 and 1 citation(s), respectively

4.1 Bamarick era: between 1996 and June 2009

During the Bamarick era, *MF*'s main focus centered on accounting research. As [Table 9](#) shows, a gradual shift occurred in the journal's focus. The average publication year for articles with accounting research as keyword is around 2001. Later in this period, published topics seemingly shifted toward corporate finance including topics in dividends, risk management, compensation, corporate governance and mergers and acquisitions (M&As).

The United States remained the primary focus of articles around 2000. Subsequently, studies involving Greece, China, the United Kingdom, Germany, Malaysia and Japan emerged in the later part of this period. At this time, *MF* gained a more global focus. [Figure 1](#) represents the keyword network between 1996 and June 2019. The size of the node depicts the degree of co-occurrence, which represents the number of times two keywords occur together.

4.2 Emerald era: regular issues between July 2009 and 2019

An analysis of [Table 10](#) reveals some changes from the Bamarick era. Although the stock market and stock returns still remain prominent topics, others emerge such as corporate governance and capital structure, suggesting a widening of *MF*'s scope. During the Bamarick

Note(s): This table lists the 25 most often used keywords by *MF* authors during the Bamarick era between 1996 and June 2009 where TP = number of articles with a given keyword, DC = degree of centrality for a given keyword in the co-occurrence network, Avg. Pub. Year = Average publication year for the articles with a given keyword and TC = total citations received by these articles

Table 9.
The 25 most often used
keywords by *MF*
authors during the
Bamarick era between
1996 and June 2009

era, corporate governance was beginning to attract interest, but it became much more popular during the Emerald era. The average publication year of the articles containing the keyword “corporate governance” is 2015. Although interest in corporate governance may partially reflect the impact of the global financial crisis of 2007–2008 (GFC), some concern about corporate governance appeared before the GFC. Other areas of increased attention include corporate social responsibility and diversification.

Although studies focusing on the United States characterized the Bamarick era, the Emerald era ushered in a greater global orientation. For example, studies dealing with India, Greece, China and Japan began to emerge as indicated by the keyword list. [Figure 2](#) represents the keyword co-occurrence network for the regular issues during the Emerald era.

4.3 Emerald era—special issues between July 2009 and 2019

Beginning in 2009, *MF* started publishing three or four special issues each year. As [Table 11](#) shows, these special issues focus on corporate governance and other issues such as dividends and investments. Most articles contained in these special issues focus on the United States with some attention to Greece. These nations are among *MF*'s top contributors and appear among the keywords in both eras. [Figure 3](#) represents the keyword co-occurrence network for the special issues during the Emerald era and shows the prominence of corporate governance.

Keyword	TP	DC	Avg. pub. year	TC
Corporate governance	45	28	2015	135
Stock markets	24	28	2012	117
Stock returns	23	22	2014	45

China	9	10	2014	33

Table 10.
The 25 most often used
keywords by *MF*
authors during the
Emerald era between
July 2009 and 2019:
regular issues

Note(s): This table lists the 25 most often used keywords by *MF* authors in regular issues during the Emerald era between July 2009 and 2019 where TP = number of articles with a given keyword, DC = degree of centrality for a given keyword in the co-occurrence network, Avg. Pub. Year = Average publication year for the articles with a given keyword and TC = total citations received by these articles

cluster is by [Abdullah et al. \(2007\)](#), who examine performance differences between Islamic and non-Islamic mutual funds. The next most cited article is by [Goldreyer and Diltz \(1999\)](#), who investigate the performance of socially responsible mutual funds followed by [Maghyereh and Al-Kandari \(2007\)](#), who study the linkages between oil prices and stock markets in Gulf Co-Operations Council Countries (GCC) countries.

(2) Clusters 2 and 6: corporate governance

These two clusters contain 353 articles with 2,002 citations. These clusters focus on issues such as earnings management, risk disclosures, board independence, board diversity, board composition, corporate failure, corporate fraud and firm ownership. The most highly cited article is by [Abbott et al. \(2000\)](#), who examine the impact of board independence on corporate fraud. The next two articles, [Beneish \(2001\)](#) and [Peni and Vähämaa \(2010\)](#), deal with earnings management.

(3) Cluster 3: banking

This cluster contains 180 articles with 1,706 citations. These articles examine various banking issues including the determinants of bank profits, bank mergers, Islamic banking, bank efficiency and relationship banking. [Kosmidou \(2008\)](#), the most highly cited article in this cluster, analyzes the determinants of Greek bank profits during the EU crisis followed by [Galagedera and Silvapulle \(2002\)](#), who apply data envelopment approach (DEA)

Table 12.

financial decision-making and attract strong interest after 2009. However, cluster 4 receives more attention in the Bamarick era, and cluster 5 gets greater attention in the Emerald era.

6. Country coauthorship network

What is the status of coauthorship of *MF* articles? Table 14 lists the countries with the most relational ties in *MF*'s coauthorship network. Although authors affiliated with the United States have many collaborations as seen in their total link strength (TLS), Australia leads in the number of relational ties. Additionally, nations such as India and Pakistan became part of this network much later as shown by their average publication year. Authors affiliated with other nations enter the coauthorship network over time.

MF 46,11	Year	Cluster 1	Cluster 2	Cluster 3	Cluster 4	Cluster 5	Cluster 6	Cluster 7

Table 13.
Publications in major
clusters by year

Note(s): This table shows the number of publications in each cluster annually between 1996 and 2019

Table 15 lists the country pairs with the highest frequency of collaboration among *MF* authors. Canada and the United States share the most collaborations with 18 followed by Taiwan and the United States and the United Kingdom and the United States with 12 each. As the centerpiece of the entire network, the United States appears in most prominent pairings. The reason behind these pairing may range from geographical proximity to common issues. Figure 8 shows the coauthorship network of countries with the node size signifying the number of relational ties while the thickness of the link indicates the level of collaboration.

7. Summary and conclusions

This study provides a retrospective of *MF* between 1996 and 2019. The analysis reveals a growth in both productivity and reputation as measured by total publications and total citations, respectively. Over time, *MF* has transitioned from focusing on accounting research to a wider array of mainly corporate finance issues.

Bibliographic coupling of articles reveals seven major thematic clusters: (1) the stock markets; (2) ownership, board independence and monitoring; (3) banking; (4) risk management, intellectual capital and accounting practices; (5) capital budgeting and dividend policy; (6) board diversity, disclosures and strategic direction; and (7) IPOs. An analysis of the evolution of these clusters shows a dramatic change in the popularity of topics over time.

An analysis of *MF*'s content suggests several directions. First, *MF* can expand its coverage into new fields such as fintech. Second, it can expand coverage on issues

Country	DC	TLS	Avg. pub. year

New Zealand	United States	5

Table 15.
Most prominent
country pairs

Note(s): This table lists the country pairs with at least five collaborations among *MF* authors

involving financial education. Third, *MF* can publish more research involving emerging economies.

This study makes several contributions. Besides providing insights into the journal's publication and citation patterns, it offers a retrospective into the journal's thematic evolution across different ownership and time periods. Further, the study offers insights into the

Figure 8.
Coauthorship network
of countries affiliated
with *MF* authors

collaboration patterns of *MFs* authors. Finally, it suggests several future directions for the journal to pursue.
